Below are the 10 Most Interesting facts about the Human Digestive System. The salivary glands can produce up to 1.5 quarts (1,500 milliliters) of saliva daily. Food remains in the esophagus for as little as five seconds before entering the stomach. The human stomach can hold as much as 2.1 quarts (2 liters) of food.

~~Human Digestive System: 10 Most Interesting Facts to Know ...~~

This busy brown organ plays an important role in the human digestive system — it's your largest internal organ and has about 500 different jobs! It's like a chemical processing factory — blood carries nutrients there from the small intestine, then the liver decides what to do with them. It also gets rid of toxins (substances that can be harmful to the body), recycles old blood cells, makes bile and other digestive juices, and produces, stores and releases glucose (to give you energy).

## ~~The human digestive system | National Geographic Kids~~

Human digestive system, the system used in the human body for the process of digestion. The human digestive system consists primarily of the digestive tract, or the series of structures and organs through which food and liquids pass during their processing into forms absorbable into the bloodstream. The system also consists of the structures through which wastes pass in the process of elimination and other organs that contribute juices necessary for the digestive process.

## ~~human digestive system | Description, Parts, & Functions ...~~

The human digestive system wouldn't work without trillions of microscopic helpers: bacteria and other single-celled organisms. Helpful bacteria that live in your digestive system break down tough fibers and other undigestible food particles. These helpful microbes also kill harmful bacteria and strengthen your immune system.
