The fourth edition of General Linguistics provides a comprehensive and accessible introduction to linguistics. The book considers: - semantics and pragmatics - dialect and style - phonetics and phonology - morphology and syntax, with reference both to traditional and current theories - comparative-historical linguistics and linguistic typology - linguistics' relation to other disciplines - the practical application of linguistics - the 2,500 years of linguistic thought that lies behind what we do and think today

This is a compact introduction to some of the principal topics of mathematical logic. In the belief that beginners should be exposed

to the most natural and easiest proofs, I have used free-swinging set-theoretic methods. The significance of a demand for constructive proofs can be evaluated only after a certain amount of experience with mathematical logic has been obtained. If we are to be expelled from "Cantor's paradise" (as nonconstructive set theory was called by Hilbert), at least we should know what we are missing. The major changes in this new edition are the following. (1) In Chapter 5, Effective Computability, Turing-computability IS now the central notion, and diagrams (flow-charts) are used to construct Turing machines. There are also treatments of Markov algorithms, Herbrand-Godel-computability, register machines, and random access machines. Recursion theory is gone into a little more deeply, including the s-m-n theorem, the recursion theorem, and Rice's Theorem. (2) The proofs of the Incompleteness Theorems are now based upon the Diagonalization Lemma. Lob's Theorem and its connection with Godel's Second Theorem are also studied. (3) In Chapter 2, Quantification Theory, Henkin's proof of the completeness theorem has been postponed until the reader has gained more experience in proof techniques. The exposition of the proof itself has been improved by breaking it down into smaller pieces and using the notion of a scapegoat theory. There is also an entirely new section on semantic trees.

The second edition of the popular English Phonetics and Phonology textbook has been extensively updated and expanded to offer greater flexibility for teachers and increased support for non-native speakers studying the sound systems of English. An ideal introduction to the study of the sound systems of English, designed for those with no previous knowledge of the subject. Second edition now rigorously updated and expanded to reflect feedback from existing students and to increase support for non-native speakers of English. Benefits from a useful introduction to articulatory phonetics, along with coverage of the main aspects of the phonological structure of present-day English. Features a completely new chapter on the relationship between English spelling and pronunciation, extended coverage of intonation, and extensive revisions to sections on rhythm, word stress, intonation and varieties of English worldwide. Will include invaluable chapter-by-chapter exercises, linked to sound files available on the accompanying website at <http://www.wiley.com/go/carrphonetics> (available upon publication).

Humanistic Values from Academic Community Perspective is authored by a range of international experts with a diversity of backgrounds and perspectives and provides a collection of ideas, examples and solutions on Humanistic Values in Academia,

implementation and problems that occur in this area of consideration. This volume is a result of numerous discussions within the academic members to incorporate humanistic values like dignity, integrity, care, human rights etc. into our conduct composed of all the academic levels, beginning with students through staff, faculty and administration. Authors and contributors of this book assume the importance and crucial role of values in managing contemporary organizations emphasizing the fact that the oldest organizations managed by core values are not the globally known and acknowledged business corporation but the institutions like churches, armies and the universities. Numerous institutions of higher education are proud of their core values and present them to their employees, students, and stakeholders. The book is divided into four parts: I Introduction, II Humanistic values from academic perspective, III Humanistic values from student / faculty perspective and part IV Humanistic values from educational administrative perspective. We sincerely hope that the chapters presented in this volume will open new horizons for the understanding of humanistic values in academia and simultaneously it will provide inspiration and encouragement for further research in this area of study.

This book focuses on developing and updating prospective and practicing chemistry teachers' pedagogical content knowledge. The 11 chapters of the book discuss the most essential theories from general and science education, and in the second part of each of the chapters apply the theory to examples from the chemistry classroom. Key sentences, tasks for self-assessment, and suggestions for further reading are also included. The book is focused on many different issues a teacher of chemistry is concerned with. The chapters provide contemporary discussions of the chemistry curriculum, objectives and assessment, motivation, learning difficulties, linguistic issues, practical work, student active pedagogies, ICT, informal learning, continuous professional development, and teaching chemistry in developing environments. This book, with contributions from many of the world's top experts in chemistry education, is a major publication offering something that has not previously been available. Within this single volume, chemistry teachers, teacher educators, and prospective teachers will find information and advice relating to key issues in teaching (such as the curriculum, assessment and so forth), but contextualised in terms of the specifics of teaching and learning of chemistry, and drawing upon the extensive research in the field. Moreover, the book is written in a scholarly style with extensive citations to the literature, thus

providing an excellent starting point for teachers and research students undertaking scholarly studies in chemistry education; whilst, at the same time, offering insight and practical advice to support the planning of effective chemistry teaching. This book should be considered essential reading for those preparing for chemistry teaching, and will be an important addition to the libraries of all concerned with chemical education. Dr Keith S. Taber (University of Cambridge; Editor: Chemistry Education Research and Practice) The highly regarded collection of authors in this book fills a critical void by providing an essential resource for teachers of chemistry to enhance pedagogical content knowledge for teaching modern chemistry. Through clever orchestration of examples and theory, and with carefully framed guiding questions, the book equips teachers to act on the relevance of essential chemistry knowledge to navigate such challenges as context, motivation to learn, thinking, activity, language, assessment, and maintaining professional expertise. If you are a secondary or post-secondary teacher of chemistry, this book will quickly become a favorite well-thumbed resource! Professor Hannah Sevian (University of Massachusetts Boston)
