small bands of hunter-gatherers 100,000 years ago to the present-day global network through which our species has come to dominate the entire Earth. This bird's-eye view of human history delves into the development of sapiens' social organization and the structural features of human cultures through which our species has spread, replicated, and evolved, including the breakthroughs of human language with its infinite expressions, the use of the human imagination, and the rise of the concept of a better future that lies just beyond the horizon. Through these mechanisms, our species has evolved socially, rather than biologically, into a species that's increasingly in control of our own destiny. This book considers not only how this evolution has occurred but questions of whether this "progress" has truly been beneficial and how we might, with our awareness of how we got here, decide where we want to go. Here's what you'll learn about in this summary: Although sapiens have not evolved biologically in 100,000 years, we have experienced radical evolutions in the social order driven by our ability to collectively imagine. History, overall, is moving in the direction of global unity of humankind. None of the outcomes of history have been inevitable, and the flexible nature of the social order may mean that our species can control its destiny. Official U.S. edition with full color illustrations throughout. NEW YORK TIMES BESTSELLER Yuval Noah Harari, author of the critically-acclaimed New York Times bestseller and international phenomenon Sapiens, returns with an equally original, compelling, and provocative book, turning his focus toward humanity 's future, and our quest to upgrade humans into gods. Over the past century humankind has managed to do the impossible and rein in famine, plague, and war. This may seem hard to accept, but, as Harari explains in his trademark style—thorough, yet riveting—famine, plague and war have been transformed from incomprehensible and uncontrollable forces of nature into manageable challenges. For the first time ever, more people die from eating too much than from eating too little; more people die from old age than from infectious diseases; and more people commit suicide than are killed by soldiers, terrorists and criminals put together. The average American is a thousand times more likely to die from binging at McDonalds than from being blown up by Al Qaeda. What then will replace famine, plague, and war at the top of the human agenda? As the self-made gods of planet earth, what destinies will we set ourselves, and which quests will we undertake? Homo Deus explores the projects, dreams and nightmares that will shape the twenty-first century—from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is Homo
